

# AQUATICS

## *What do we mean by aquatics?*

We use the term *aquatics* to describe the use of water in the landscape. This can range from the reclamation of a small wetland to the installation of a pond and everything in between. At **New England Landscape & Aquatics** our specialty isn't just ponds ... it is the **harmonious use of water in the landscape**.

## *What are the benefits of using aquatics in my landscape?*

Traditional gardens can provide great beauty to any landscape. Once water is introduced to the mix the landscape literally comes to life. Water attracts many beneficial organisms to the landscape. Birds, frogs, salamanders, fish, and insects all can benefit the microclimate of your landscape. Wetland (bog) and submersible (lilies) plants add new textures, colors and foliage to the landscape that cannot be achieved with traditional perennials and shrubs. Other benefits include:

- Contributes to environmental sustainability
- Low maintenance costs
- Excellent return on investment

## *What types of Aquatics can I bring to my landscape?*

- Wetland installation and reclamation
- Pond installation and reclamation
- Wetland mitigation
- Rain gardens
- Swim ponds
- Fish ponds
- Reflecting pools
- Container water features
- Waterfalls
- Stream beds
